WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 56 mm off the extrusion, square to its length, so the fins stand upright. Face both cut ends flat; deburr; keep the ports clean.

The four corner ports are part of the extrusion; tap them M4 from both ends, 12 mm deep (they take the floor and lid screws).

Connector end wall (short wall, holes 28.5 above the bottom edge, measured from the socket side's outer face): XT90 slot 12 x 22 at 28 with two 3.2 holes 14.5 above and below; motor 20.5 hole at 56; safety loop 16.5 hole at 83 and command 16.5 hole at 109, each with four 3.2 holes on a 15 mm square.

Socket side: speed socket 8.5 hole between the 1st and 2nd fins from the far end, 24.5 from that end, 18 above the bottom edge.

Far end wall: vent hole 5 mm on the centre line, 43 above the bottom.

Check: each socket seats flat; nothing fouls a port or a fin.
